SUMMARY

Recent B.Tech graduate (Electronics and Computer Engineering, 2026) with hands-on experience building full-stack web applications and applied AI/ML systems. Proficient in Python, JavaScript/TypeScript, React, Next.js, FastAPI, and Node.js, with additional depth in agentic AI orchestration and retrieval-augmented generation pipelines. Seeking a Trainee Software Developer role to apply strong problem-solving and production-grade engineering skills.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C++

Frontend: React, Next.js, HTML5, CSS3

Backend: FastAPI, Node.js, Express.js

Databases: PostgreSQL, Qdrant, ChromaDB

AI/ML & Agentic Systems: LangGraph, LangChain, RAG (hybrid BM25 + vector retrieval), TFLite, ONNX

Tools & Platforms: Git/GitHub, Docker, GitHub Actions, Render, Vercel, Hugging Face Spaces

PROJECTS

SupportSense — Full-Stack AI Support Ticket Platform ([GitHub](#)) | *Node.js, React, TypeScript, PostgreSQL*

- Built a complete support ticketing platform using Node.js/Express, React, and TypeScript, backed by PostgreSQL and containerized with Docker
- Integrated a dedicated FastAPI microservice for real-time sentiment analysis on incoming support tickets

Autonomous Document Generation Agent API ([GitHub](#)) | *FastAPI, Groq, Render*

- Built an asynchronous FastAPI service running a four-step Groq-powered LLM pipeline, with crash-safe state persistence and atomic file writes
- Deployed to Render with production-grade error recovery and state checkpointing

SRE/FinOps Triage Swarm ([GitHub](#)) | *LangChain, Qdrant, BM25, Python*

- Designed a multi-agent triage system using LangChain with hybrid Qdrant + BM25 retrieval, achieving ~250ms average query latency
- Orchestrated multiple specialized agents to automatically route and resolve infrastructure incidents

MAITRI — Multimodal Emotion AI ([GitHub](#)) | *DeepFace, TinyLlama, SvelteKit, FastAPI*

- Built a multimodal emotion detection system combining DeepFace and TinyLlama, served via a SvelteKit/FastAPI stack
- Deployed a live demo to Hugging Face Spaces for ISRO Smart India Hackathon evaluation

EXPERIENCE

Event Head, Developer Student Clubs ECESA — *Jan 2024 – Jun 2026*

- Led coordination of technical events and initiatives reaching 1,500+ students, managing logistics, speaker outreach, and cross-team execution

Hardware-in-the-Loop Intern, SEDEMAC Mechatronics — *Dec 2025 – May 2026*

- Contributed to automotive ECU validation using hardware-in-the-loop (HIL) testing methodologies

Embedded Systems Intern, Rapid System — *Jun 2024 – Jul 2024*

- Worked on microcontroller-based control logic for a dynamic balancing machine

EDUCATION

B.Tech, Electronics and Computer Engineering

Sharad Institute of Technology, Maharashtra — *July 2022 – June 2026*

CGPA: 7.05 / 10

ACHIEVEMENTS

- Co-registered holder of a Design under India's Designs Act (Weed Control Device, Design No. 478508-001)
- Competed at DIPEX and Electrovert technical events with Team TRINETRA/ETESA
